

Patient management software lyra (A009-441)

One place for all therapy-relevant data

Patient info, overview of last training sessions, training settings for the lyra and progress overview digitally available in the patient management software.

- ✓ Digital
 - All data clearly arranged in one place
 - No collections of notes or illegible or traceable documents
- ✓ Simple and time-saving
 - Optimized documentation through standardized reports
 - Automatic history development
 - Direct transfer of device data

Oriented to the therapist workflow

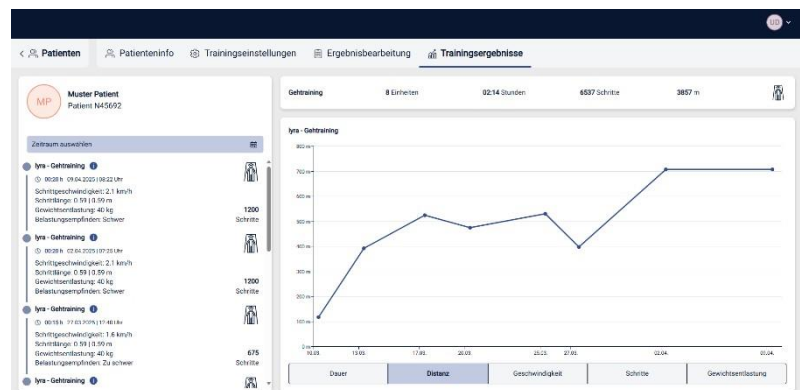

The patient management software provides support through the training session. Developed on the basis of therapist feedback – tailored precisely to workflows and needs.

- ✓ Supportive
 - The necessary data at the right time to support the training design.
- ✓ Flexible
 - Can be used on computers, tablets or larger smart phones without installation – allows access to the data both from the therapy room and from the therapy documentation.

Intuitive progress tracking: Therapy design and patient motivation

The graphical visualization allows a direct overview of the patient's progress.

- ✓ Customizable
 - Relevant time periods, comparison of the first and last training and display parameters can be selected.
- ✓ Clear
 - Due to the intuitive presentation suitable for showing the patient his training progress – for maintaining motivation.

Summary PDF Training Documentation

In one document, patient information, sum of the most important parameters, comparison of the first and last training as well as the protocol of all units and graphical progress representations.

- ✓ Transparent
 - Can be used for discharge reports or documentation and transparency towards insurance companies or similar.
- ✓ Cross-system
 - Can be stored in most systems without any problems, without complex interface configuration.
